In this review journal, biotechnology is viewed in a comprehensive context: a multidisciplinary field in which biological systems are developed and/or used for the provision of commercial goods or services. The journal is devoted to all areas of biotechnology including relevant aspects of its disciplinary underpinnings in biology, chemistry and engineering. The primary purpose is to provide regular, rapid but authoritative reviews of important advances in this field for students, researchers, managers and others in industry, government and academia. A timely series of research review papers, patent abstracts and summaries of special government reports on the principles and practices of biotechnology will be covered quarterly. The patent abstracts and government report summaries are selected by the Executive Editor. The review papers are generated from refereed manuscripts.

TETRAHEDRON: ASYMMETRY

THE INTERNATIONAL JOURNAL FOR RAPID PUBLICATION ON ALL ASPECTS OF ASYMMETRY IN ORGANIC, INORGANIC, ORGANOMETALLIC, PHYSICAL AND BIO-ORGANIC CHEMISTRY

Editor-in-Chief: **S. G. DAVIES,** *The Dyson Perrins Laboratory, South Parks Road, Oxford OX1 3QY, UK*
Chairman of the Executive Board of Editors for Tetrahedron Publications:
SIR DEREK BARTON FRS, *Department of Chemistry, Texas A and M University, College Station, Texas 77843-3255, USA*

Tetrahedron: Asymmetry presents experimental or theoretical research results of outstanding significance and timeliness on asymmetry in organic, inorganic, organometallic and physical chemistry, as well as its application to related disciplines, especially bio-organic chemistry. The journal publishes critical reviews, original research articles and preliminary communications dealing with all aspects of the chemical, physical and theoretical properties of non-racemic organic and inorganic materials and processes.
Topics relevant to the journal include: the physico-chemical and biological properties of enantiomers; strategies and methodologies of asymmetric synthesis; resolution; chirality recognition and enhancement; analytical techniques for assessing enantiomeric purity and the unambiguous determination of absolute configuration; and molecular graphics and modelling methods for interpreting and predicting asymmetric phenomena. Papers describing the synthesis or properties of non-racemic molecules will be required to include a separate statement in the form of a Stereochemistry Abstract, for publication in the same issue, of the criteria used for the assignment of configuration and enantiomeric purity.
